Aged Care Industry Information Technology Council – Technology Roadmap for the Australian Aged Care Sector

- "The aged care industry is in an era of unprecedented change. The confluence of current aged care reforms, business model transformation and technological disruption is reshaping multiple areas of the aged care industry ecosystem". P4

- "…increasing collaboration between aged care providers, other end users, vendors, developers and other key stakeholders…[enables]…agreement on interoperability". p17

Australia's National Digital Health Strategy – Australian Digital Health Agency 2017

- "…a co-ordinated approach between industry and government is critical. The government has a clear role in providing key infrastructure and allowing industry to meet the market. It is the role of the government to capitalise on existing projects as well as to foster new solutions". P29

- "When aged care residents are treated by aged care and healthcare professionals, there is often an "information gap", with a lack of sharing of the older person's information about health conditions and medicines between the two sectors. It has been demonstrated that digital health interventions for aged care residents can dramatically reduce the number of transfers into hospital". p47
